

22. Entwurfsmuster (Design Patterns) - Eine Einführung

Prof. Dr. Uwe Aßmann
Lehrstuhl Softwaretechnologie
Fakultät für Informatik
TU Dresden
22-01, 4/30/22

[1\) Warum Entwurfsmuster?](#)

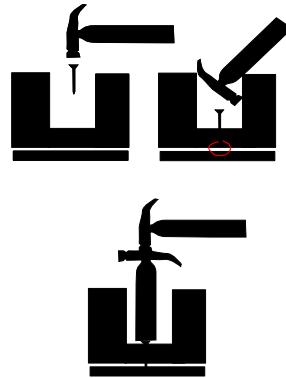

Achtung: Dieser Foliensatz ist teilweise in Englisch gefasst, weil das Thema in der Englisch-sprachigen Kurs "Design Patterns and Frameworks" wiederkehrt.
Mit der Bitte um Verständnis.

Software Engineering is a Positive Activity

Thus it will be seen that *engineering* is a distinctive and important profession. To some even it is the topmost of all professions. However true that may or may not be to-day, certain it is that some day it will be true, for the reason that engineers serve humanity at every practical turn.

Engineers make life easier to live—easier in the living; **their work is strictly constructive, sharply exact; the results positive.**

Not a profession outside of the engineering profession but that has its moments of wobbling and indecision—of faltering on the part of practitioners between the true and the untrue. Engineering knows no such weakness. Two and two make four. Engineers know that. Knowing it, and knowing also the unnumbered possible approach a problem with a certainty of conviction and a confidence in the powers of their working-tools nowhere permitted men outside the profession.

Charles M. Horton. Opportunities of engineering. www.gutenberg.org, eBook #24681; Harper and Brothers, 1922.

Dieses Zitat aus Charles Hortons Buch über “Ingenieurswesen” kann man gut auf die Softwaretechnik übertragen.

"The Tiger" (William Blake)

9 Softwaretechnologie (ST)

TIGER, TIGER, BURNING BRIGHT
IN THE FORESTS OF THE NIGHT,
WHAT IMMORTAL HAND OR EYE
COULD FRAME THY FEARFUL SYMMETRY?

IN WHAT DISTANT DEEPS OR SKIES
BURNT THE FIRE OF THINE EYES?
ON WHAT WINGS DARE HE ASPIRE?
WHAT THE HAND DARE SEIZE THE FIRE?

AND WHAT SHOULDER AND WHAT ART
COULD TWIST THE SINEWS OF THY HEART?
AND, WHEN THY HEART BEGAN TO BEAT,
WHAT DREAD HAND AND WHAT DREAD
FEET?

WHAT THE HAMMER? WHAT THE CHAIN?
IN WHAT FURNACE WAS THY BRAIN?
WHAT THE ANVIL? WHAT DREAD GRASP
DARE ITS DEADLY TERRORS CLASP?

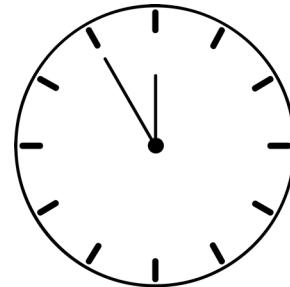

WHEN THE STARS THREW DOWN THEIR
SPEARS,
AND WATERED HEAVEN WITH THEIR TEARS,
DID HE SMILE HIS WORK TO SEE?
DID HE WHO MADE THE LAMB MAKE THEE?

TIGER, TIGER, BURNING BRIGHT
IN THE FORESTS OF THE NIGHT,
WHAT IMMORTAL HAND OR EYE
DARE FRAME THY FEARFUL SYMMETRY?

Etwas zum Entspannen auf Englisch: bitte laut und
rhytmisch vorlesen.

Vorsicht

- ▶ Wer hat schon ein Java Programm übersetzt?

- ▶ Gerade beim Thema Entwurfsmuster ist die praktische Programmiererfahrung unverzichtbar.
- ▶ Man versteht die Entwurfsmuster viel tiefer durch eigene Programmieranwendung.

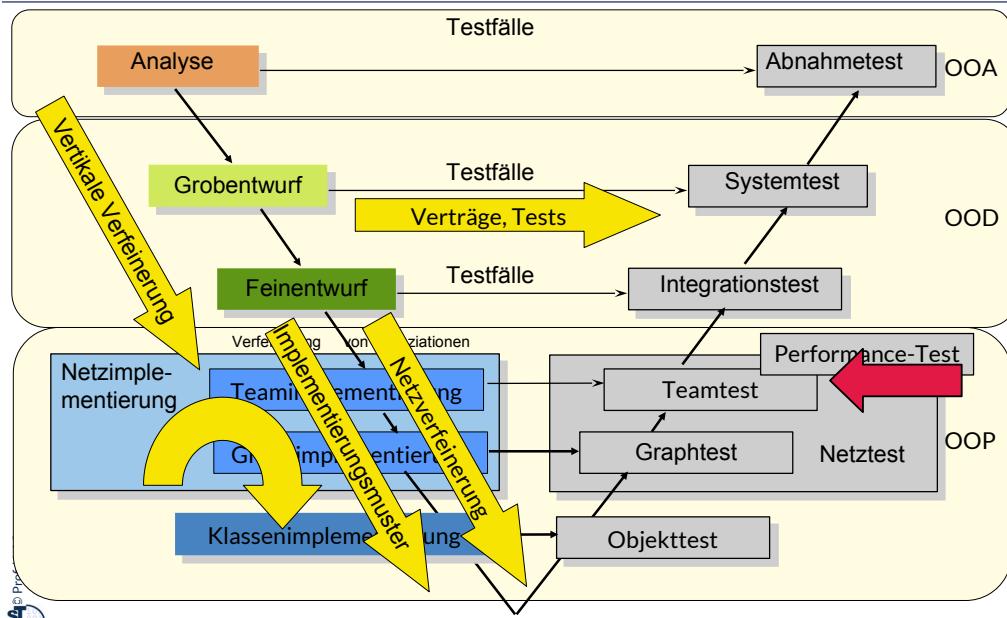

Bitte laden Sie den Java-Interpreter und -Compiler herunter. Starten Sie mal die jshell!

Oder programmieren Sie INLOOP.

Q4: Softwareentwicklung im V-Modell

[Boehm 1979]

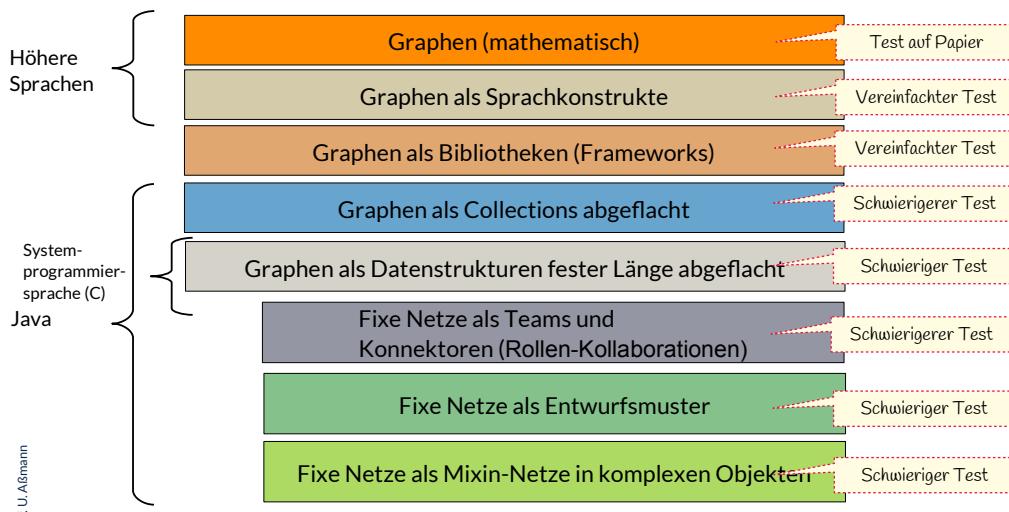

11 Softwaretechnologie (ST)

Quelle fuer das Boehm-Zitat: [Hesse/Merbeth/Fröhlich S. 37]

Netzimplementierung und Teamimplementierung bilden zwei separate Phasen der Implementierung, jeweils mit eigener Testsuite.

Repräsentation von flexiblen und fixen Objektnetzen als Datenstrukturen (Netzverfeinerung)

Auf Ebene der Anforderungen werden **flexible Objektnetze** als math. Graphen dargestellt. Im Grobentwurf und Feinentwurf werden sie repräsentiert durch (verfeinert zu)

- Graphen als **Sprachkonstrukte** (für Sprachen, die das eingebaut haben)
 - Rapid Application Development (RAD)
- Graphen aus Java-Graph-Bibliotheken (jgraph)
- **Implementierungsmuster** wie **Collections**, nach dem Abflachen/Flachklopfen von bidirektionalen Assoziationen in gerichteten Links
- maschinennahe **Implementierungsmuster** wie **Datenstrukturen fester Länge** (Arrays, Matrizen) (speicher-bewusstes Programmieren)

Wohl dem, der eine gute Testsuite für flexible Objektnetze hat!

- Jgraph, unser Beispiel-Framework für Graphen, hat Generatoren für Graphen, die die Konstruktion von Testsuiten unterstützen.

Fixe Netze mit statisch festem n, m (z.B. 1:1-Assoziationen) können durch **Teams** (Kollaborationen, Konnektoren) verfeinert werden durch

- Konnektorklassen realisieren Assoziationen und tragen Rollentypen als Assoziationsenden
- **Entwurfsmuster** wie Decorator, Chain, Composite
- interne Subobjektnetze großer Objekte (bobs), Endo-Assoziationen

22.1. Warum Entwurfsmuster?

In seinem Buch “The Timeless Way of Building” (1977) hat der Architekt Christopher Alexander (Berkeley) nach der “Quality without a name” in der Architektur gesucht.

- Was ist qualitativ hochwertige Architektur?
- Wie beginnt ein Platz zu leben? (anstelle tot zu sein)
- Was ist wahre Schönheit?

Seine Antwort ist: Schönheit und Qualität sind Sprachen der Menschen. Die Sprache der Architektur stellt Muster bereit, die kombiniert werden müssen zu schönen und qualitativ hochwertigen Architekturen.

Schönheit kann man nicht erfinden; man muss sie “sprechen” in einer stilistischen Sprache.

History: How to Write Beautiful Software

- ▶ Beginning of the 70s: the window and desktop metaphors (conceptual patterns) are discovered by the Smalltalk group in Xerox Parc, Palo Alto
- ▶ 1978/79: Goldberg and Reenskaug develop the MVC pattern for user Smalltalk interfaces at Xerox Parc
 - During porting Smalltalk-78 for the Eureka Software Factory project
- ▶ 1979: Alexander's Timeless Way of Building
 - Introduces the notion of a *pattern* and a *pattern language*
- ▶ 1987: W. Cunningham, K. Beck OOPSLA paper "Using Pattern Languages for Object-Oriented Programs" discovered Alexander's work for software engineers by applying 5 patterns in Smalltalk
- ▶ 1991: Erich Gamma's PhD Thesis about Design Patterns
 - Working with ET++, one of the first window frameworks of C++
 - At the same time, Vlissides works on InterViews (part of Athena)
- ▶ 1991: Pattern workshop at OOPSLA 91, organized by B. Anderson
- ▶ 1993: E. Gamma, R. Helm, R. Johnson, J. Vlissides. Design Patterns: Abstraction and Reuse of Object-Oriented Design. ECOOP 97, LNCS 707, Springer
- ▶ 1995: First PLOP conference (Pattern Languages Of Programming)
- ▶ 1995: GOF book

The Most Popular Definition

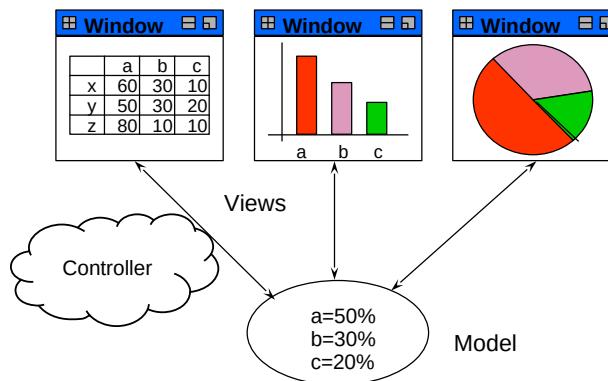

Def.: A **Design Pattern (Entwurfsmuster)** is a *solution pattern*,

- a description of a standard solution for
- a frequent design problem
- in a certain context

- ▶ Goal of a Design Pattern: Reuse of design information
 - A pattern must not be “new”!
 - A pattern writer must have a “aggressive disregard for originality”
- ▶ Such *solution patterns* are well-known in every engineering discipline
 - Mechanical engineering
 - Electrical engineering
 - Civil engineering and architecture

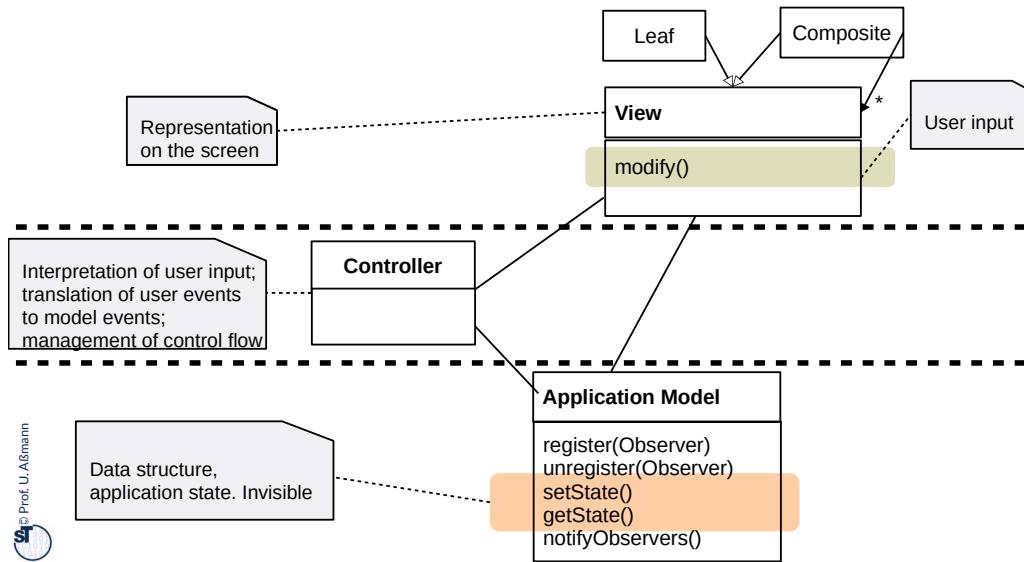

A Problem in Interactive Applications Triggered the Development of MVC Design Pattern

- ▶ How do I display and edit a data structure on the screen?
 - Reaction on user inputs?
 - Maintaining several views
 - Adding and removing new views
- ▶ Solution: Model-View-Controller pattern (MVC), a set of classes to control a data structure behind a user interface
 - Developed by Goldberg/Reenskaug in Smalltalk 1978

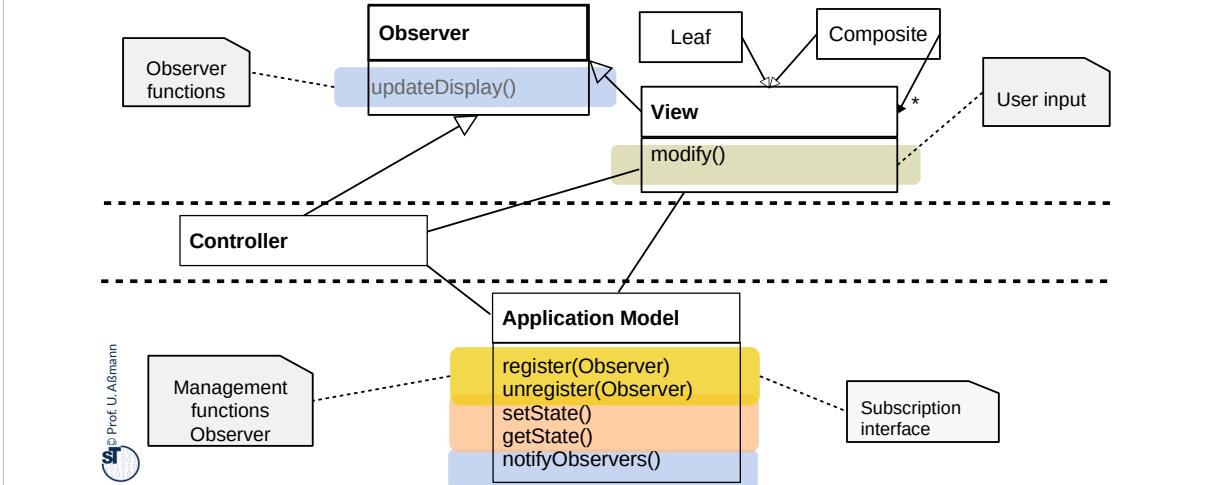

Design Pattern Model/View/Controller (MVC)

- ▶ MVC is a set of classes to control a data structure behind a user interface
- ▶ Layered structure of View, Controller and ApplicationModel

Design Pattern Model/View/Controller (MVC)

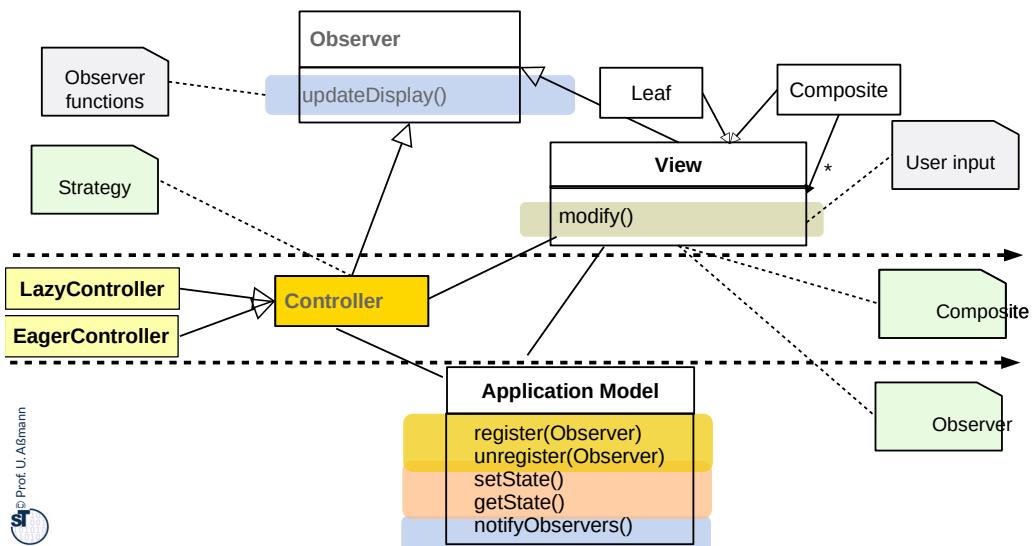

- ▶ The MVC is a *complex* design pattern. The layers are connected by the simpler patterns Observer, Composite, Strategy.
 - The Controller interprets the input of the user and transmits them into actions on the model
 - Controller and View play Listener role from Observer (asynchronous communication)
 - Model plays Subject role

Controller classes manage the traffic between the user interface (UI) and the application layer (aka “Model”).
Users act asynchronously to the application, so their actions need to be coordinated.

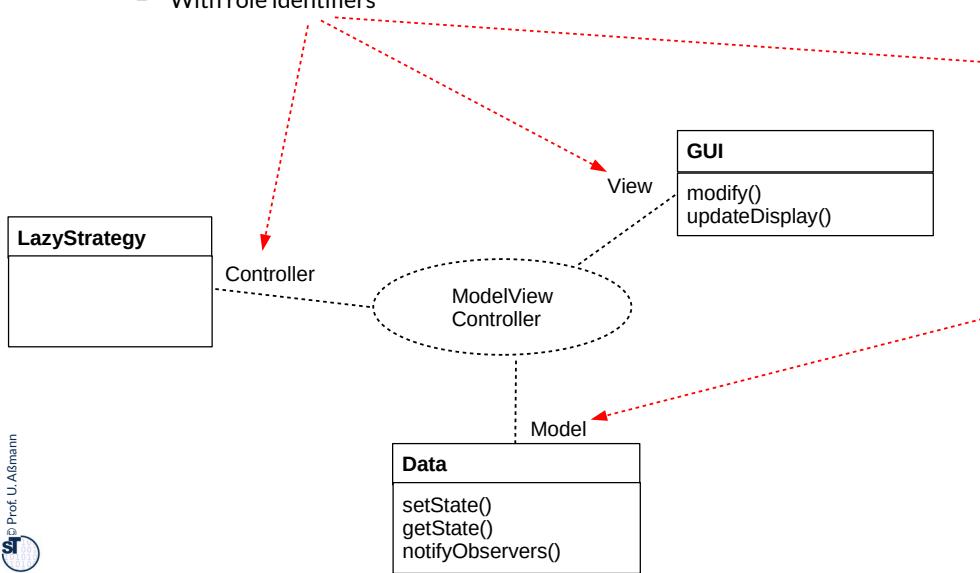

Design Pattern Model/View/Controller (MVC), Refined

- ▶ Controller follows Strategy pattern (variation of updating the screen)
- ▶ Relation within Views by Composite (tree-formed views)

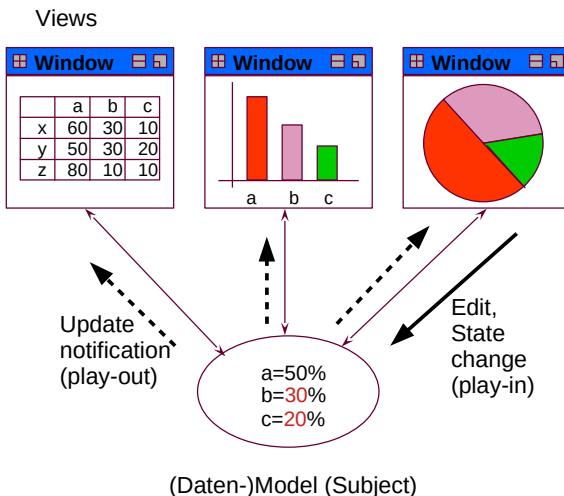

Design Pattern Model/View/Controller (MVC)

- ▶ UML has a specific notation for patterns (**collaboration classes**)
 - With role identifiers

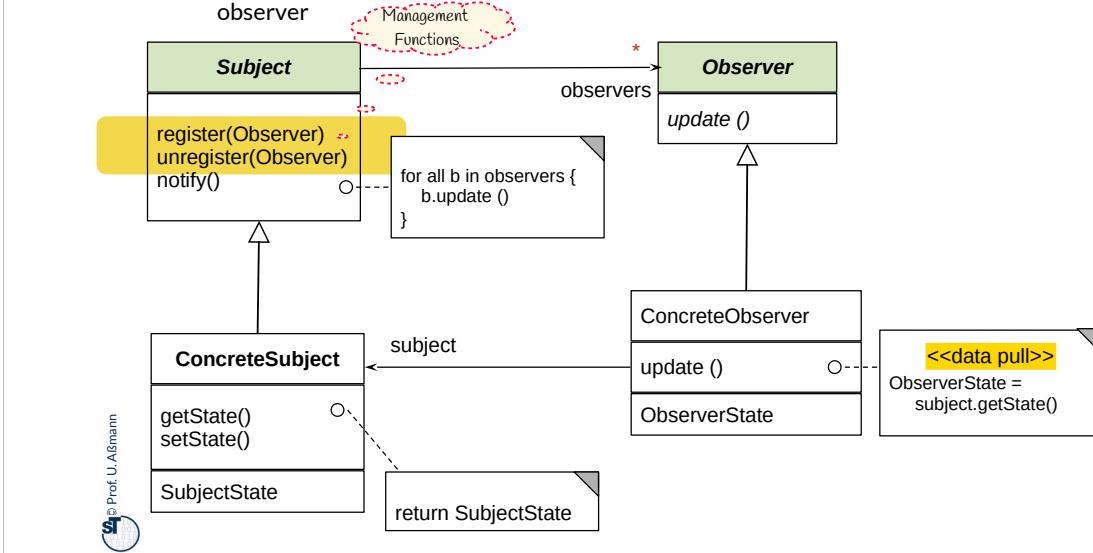

Pattern 1: Observer

- ▶ Views may register as Observer at the model (Subject)
 - They become *passive* observers of the model
 - They are notified if the model changes.
 - Then, every view updates itself by accessing the data of the model.
- ▶ Views are independent of each other
 - The model does not know how views visualize it
 - Observer decouples views strongly

Structure Observer (pull-Variant)

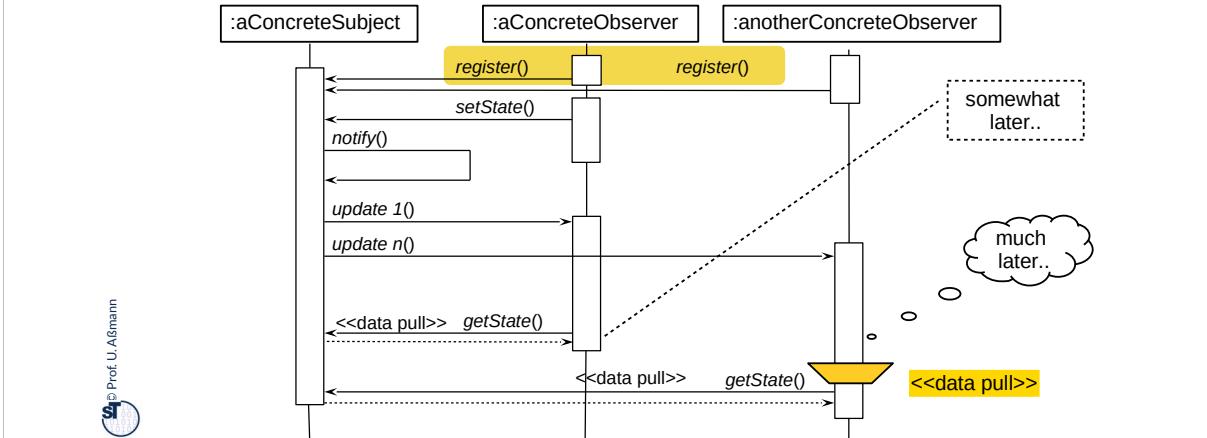

- ▶ Aka Publisher/Subscriber
- ▶ Subject does not care nor know, which observers are involved: subject independent of observer

Sequence Diagram pull-Observer

24 Softwaretechnologie (ST)

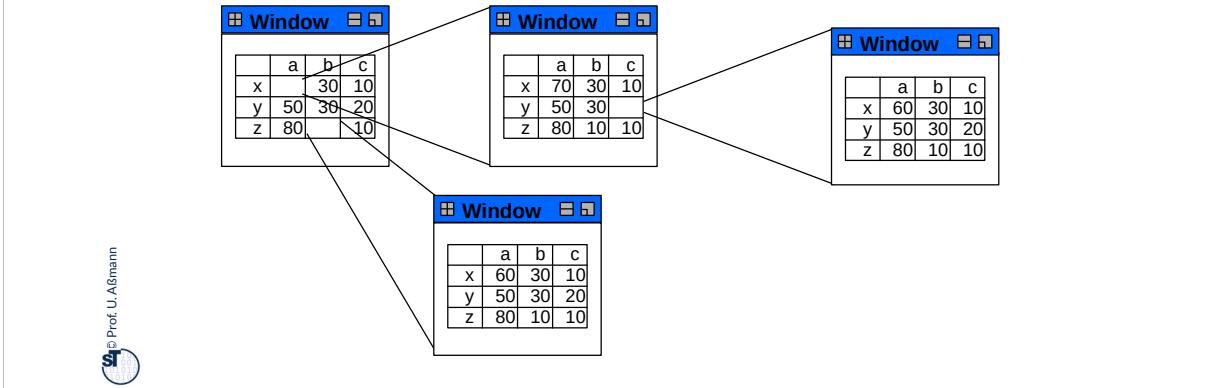

- ▶ `Observer.update()` does not transfer data, only announces an event
 - Anonymous communication possible
- ▶ Observer *pulls* data out itself
 - In the context of MVC, Controller or View pull data out of the application model themselves

Pattern 2: Composite (Rpt.)

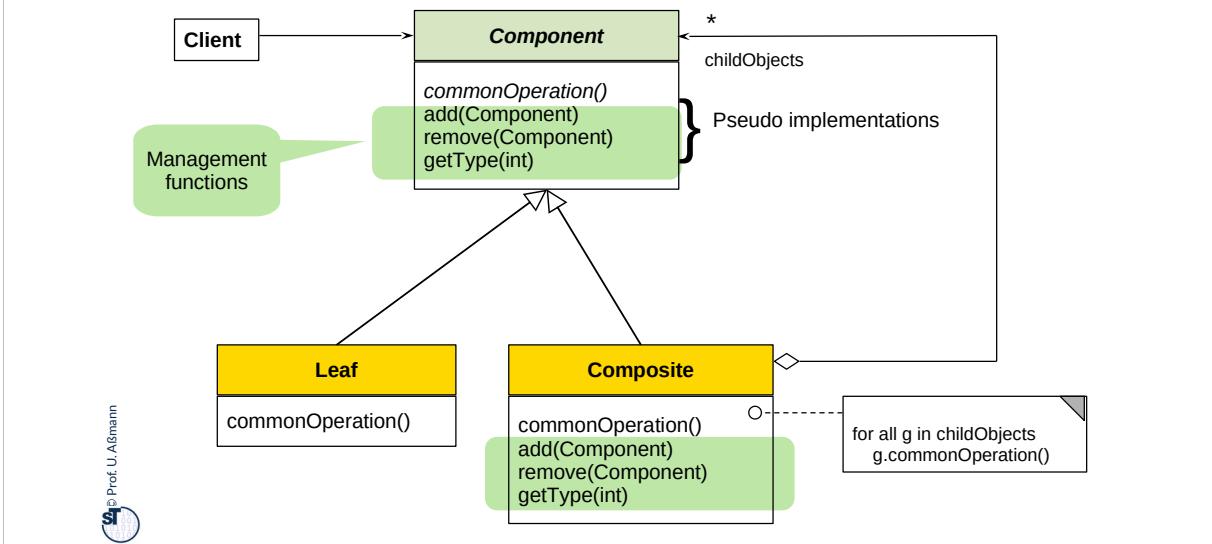

Views may be nested (Composite)

- ▶ Composite represents trees
- ▶ For a client class, Composite unifies the access to root, inner nodes, and leaves
- ▶ In MVC, views can be organized as Composite

Structure Composite (Rpt.)

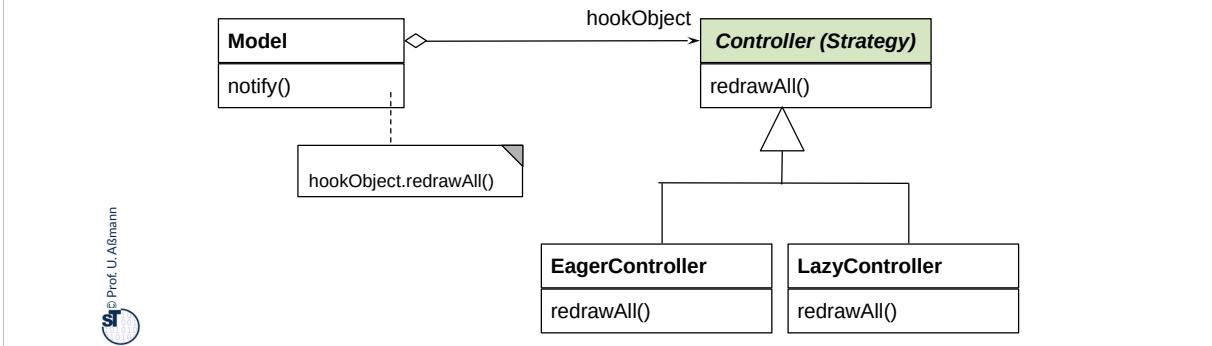

- Composite has an recursive n-aggregation to the superclass

Pattern 3: Strategy

The relation between *application model* and *controller* is a *Strategy* pattern.

- ▶ There may be different control strategies
 - Lazy or eager update of views
 - Menu or keyboard input
- ▶ A view may select subclasses of *Controller*, even dynamically; no other class changes
- ▶ Strategy is similar to Command pattern

Purposes of Design Patterns

- ▶ Design patterns improve **communication** in teams
 - Between clients and programmers
 - Between designers, implementers and testers
 - For designers, to understand good design concepts
- ▶ Design patterns create a **glossary** for software engineering (an “ontology of software design”)
 - A “software engineer” without the knowledge of patterns is a programmer
- ▶ Design patterns **document** abstract design concepts
 - Patterns are “mini-frameworks”
 - Documentation: in particular frameworks are documented by design patterns
 - Prevent re-invention of well-known solutions
 - Design patterns capture information in reverse engineering
 - Improve code structure and hence, code quality

What Have We Learned?

- ▶ Design patterns grasp good, well-known solutions for standard problems
 - good for communication
- ▶ Design patterns serve for *beautiful* software

Comprehension Questions

- ▶ Why should you learn some design patterns if you want to create beautiful, flexible, and stable software?
- ▶ Many design patterns link several objects or classes. How do you call these ensembles and how do you describe their interactions?
- ▶ Other design patterns describe endo-nets, i.e., the interactions of a complex object internally. What is different to the exo-net case?
- ▶ Why is C. Alexander's theory of beauty by patterns interesting for many disciplines, not only building architecture and software engineering?
