Problem

- 3
- ▶ How to build a framework for Business Software?
 - ▶ Software/Anwendungen/Produkte (SAP) Walldorf, founded 1972
 - Most of the Fortune 500 companies use SAP
 - ▶ SAP R/2: Mainframe solution
 - ▶ SAP R/3 1988-today. Client-server 3-tier
 - ABAP language with simple use of databases
 - Workflow specifications with Ereignis-gesteuerte Prozessketten (EPK)
 - Business blueprint: prefabricated processes for installation of the framework at the customer
 - ▶ Future: SAP NetWeaver
 - Fully Java- and web-based

Workflow Specifications with EPK

(Ereignisgesteuerte Prozessketten)

- ▶ The SAP framework is steered by business workflow specifications
 - EPC (Event-driven process chains) specify processes that communicate with events

Business Blueprint Process Framework

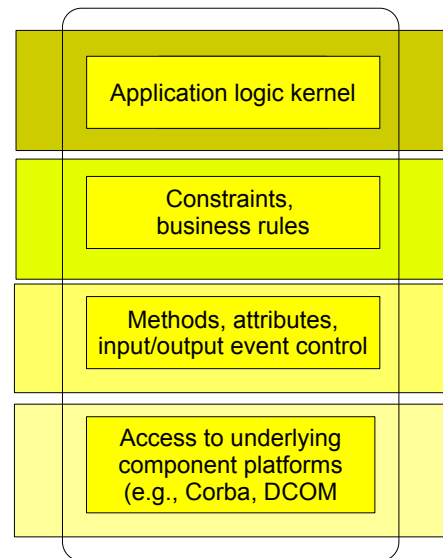

- ▶ The Business Blueprint are a collection of business process templates
 - EPK specification templates with *hooks*
 - The specifications are parameterized and adapted for concrete business processes
- ▶ They form a **process framework** for business process based applications
 - They conform to the template/hook principle, but rely on substitution
 - They are invasive specification components (see *invasive composition*, CBSE in summer).

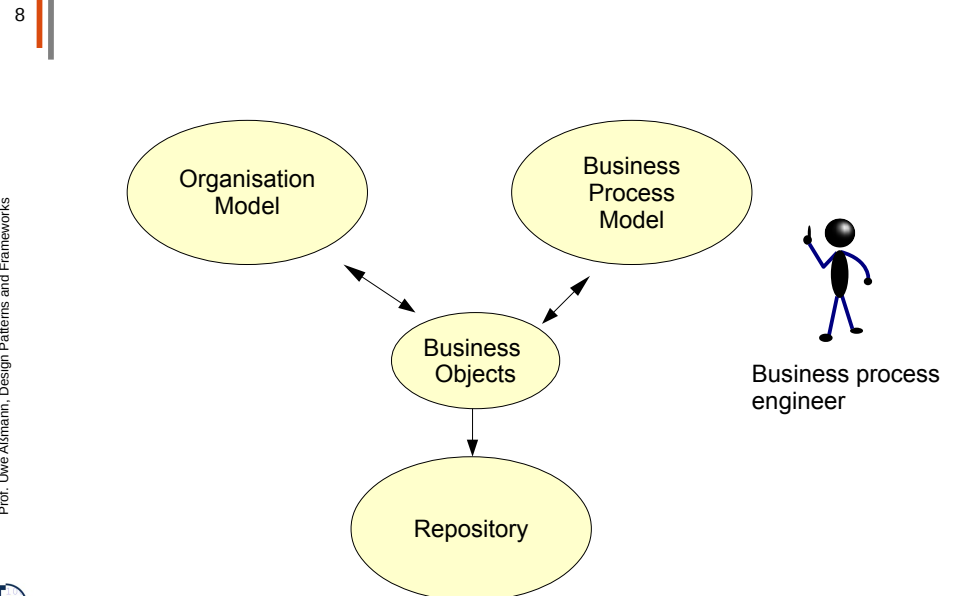

Business blueprints are business process frameworks

R/3 Repository

- ▶ Distributed with Application Link Enabling (ALE)
 - An intelligent middleware layer that distributes repositories over several databases
- ▶ Stores Business Objects with interfaces (business application interfaces, BAPI)
 - > 170 Business Objects are predefined
 - Encapsulate well-known business knowledge
- ▶ A business object is a layered object
 - Internally, it maintains an entire data model (business object data model)
- ▶ The set of business objects forms a layered framework

Engineering with R/3

Business Application Integration

9

Insight: A Process Framework needs a Process Specification Language

10

- ▶ If the framework is used for processes, we need a process specification language
 - Similar to web service area (enterprise services)
- ▶ Process languages
 - Petri nets (YAFL), Process languages
 - More in summer (CBSE)

Business frameworks rely on process execution engines

The End
