Classifying Maintenance Activities

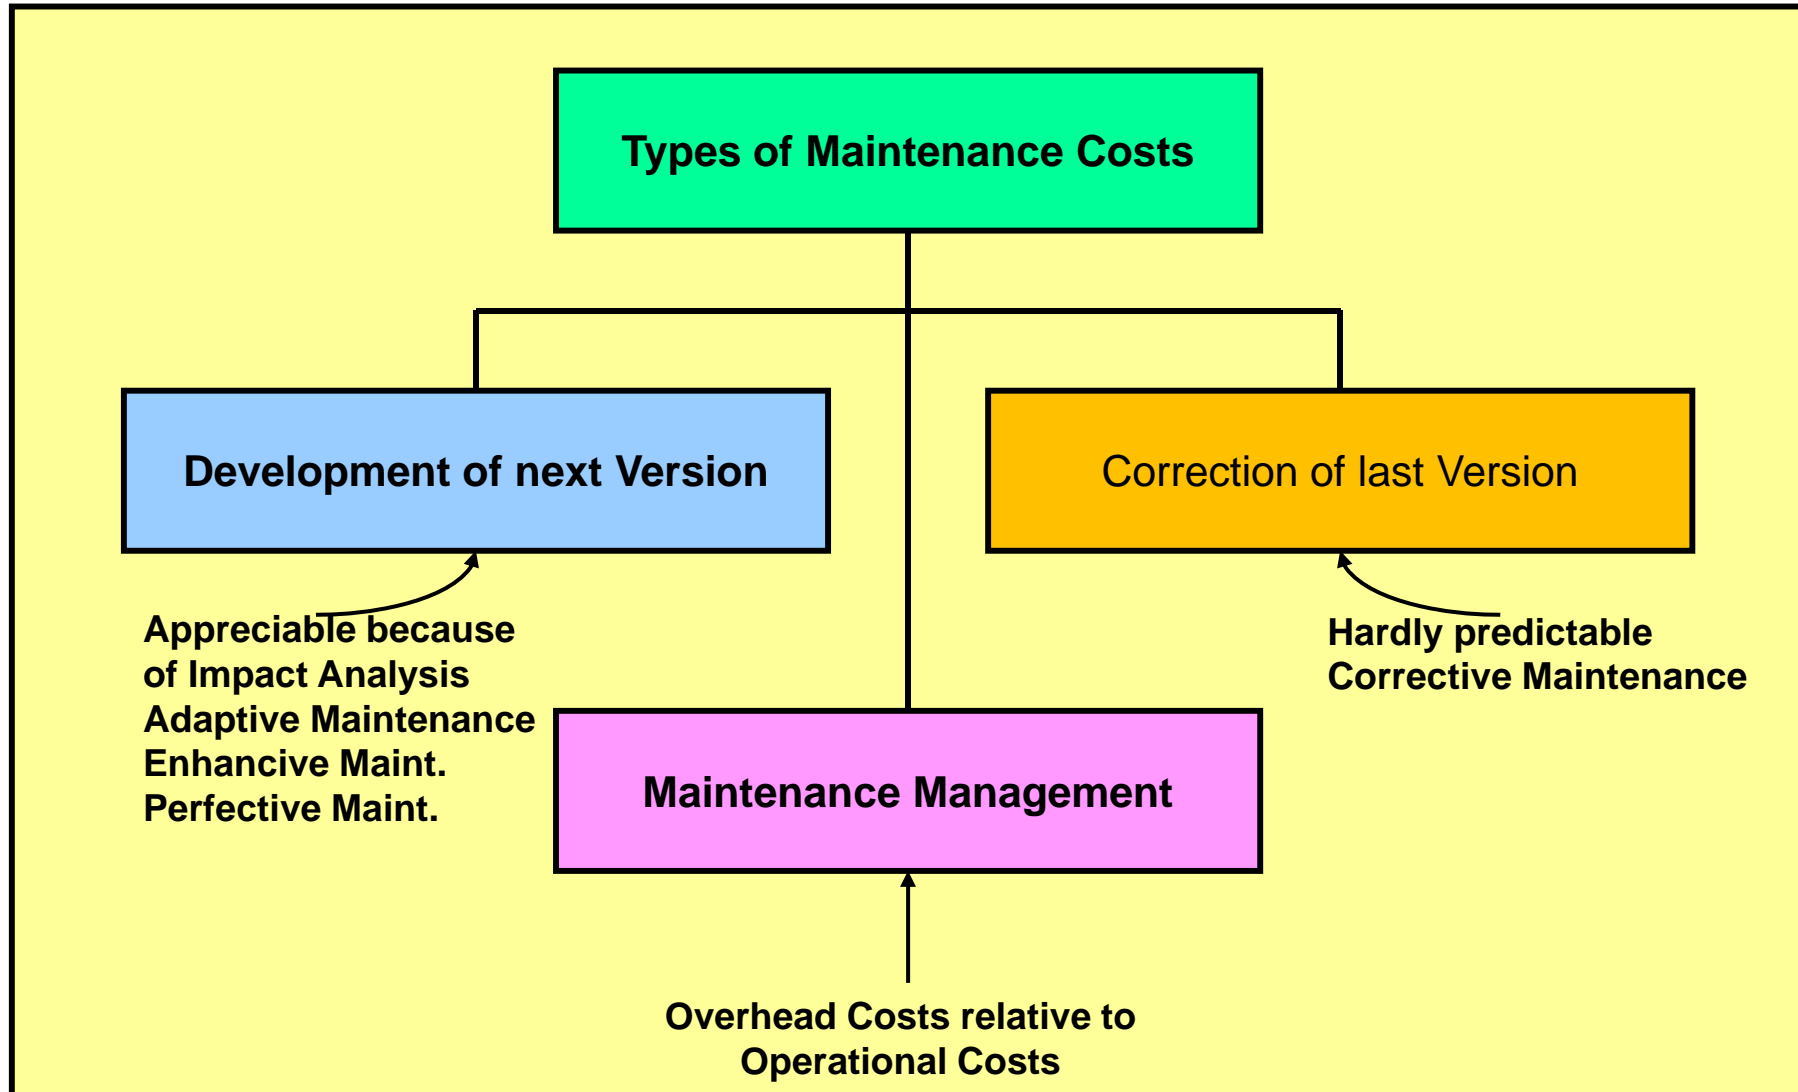

Product Versions = Maintenance Projects

Product Versions = Maintenance Projects

1 1999	7 1999	1 2000	1 2001	1 2002
Management	Maintenance Management	Maintenance Management	Maintenance Management	
Maintenance Effort	Maintenance of Version 3	Maintenance of Version 4	Maintenance of Version 5	
Development Effort	Development of Version 4	Development of Version 5	Development of Version 6	
	Version 3	Version 4	Version 5	Version 6

Types of Maintenance Costs

Calculating Maintenance Project Costs

**Calculation of
Maintenance Project Costs
requires combining
several different costs**

**Maintenance Project Costs = Costs of Development of the new Version
+ Costs of Correction of the last Version
+ Costs of Maintenance Management**

Costs of new Version are computed based on the size of the added functions and data

Costs of correction are based on the number of errors to correct

Estimating Correction Costs

Estimation of Correction Costs

- 1 Counting of Error Reports so far
Version_1 = 16 Error Reports
Version_2 = 12 Error Reports
- 2 Calculating Efforts of Error Correction so far
Version_1 = 30 Person Days = 1.4 PD per Error
Version_2 = 20 Person Days = 1.6 PD per Error
- 3 Estimation of Error Reports for the next Version
Version_3 = Number of Errors
- 4 Estimation of Error Correction Efforts for the next Version
Version_3 = ? Person Days = PD per Error x Number of Errors

Calculating Error Correction Effort

Calculating Error Correction Effort

- Effort per Error so far**
- Size of last Version in**
 - Lines of Code or Statements or Function Points or Data Points or Object Points
- Complexity of last Version in**
 - Interface Complexity, Control Flow Complexity, Condition Complexity, Inheritance Complexity, Data Flow Complexity, Language Complexity etc.
- Quality of last Version in**
 - Modularity, Flexibility, Testability, Conformity etc.
- Size, Complexity and Quality of current Version**

Estimating Effort for Error Correction

Estimation of Effort for Error Correction

Effort per Error so far = 1.6 PD

Differences between the last and the current Version

Version	Size	x	Complexity	adjusted Size	x	Quality	adjusted Size	Difference
Last:	20,000		0,7	29,000		0.6	22,400	
	0.7/0.5		= 1.4	0.5/0.6		0.8		
Current:	22,000		0,75	33,000		0,55	29,700	
	0.75/0.5		= 1.5	0.5/0.55		0.9		
Diff:	2,000		0.05	5,000		0.05	7,300	= 1.3
Effort per Error = 1.6 x 1.3 = 2.0 PD per Error Correction								

Projecting the Number of Errors

Estimation of Number of Errors

Last Error Number	= 52
Last System Size	= 20,000
Last Error Density	= $52 / 20,000 = 0.0026$
Last Test Coverage	= 0,82
Last uncovered Portion	= $20,000 \times (1.00 - 0.82) = 3,600$
Last uncovered Error Density per uncovered Portion	= $3,600 / 52 = 69$ [1 pro 69]
	(Statements, Function Points, Object Points)
Current System Size	= 22,000
Current Test Coverage	= 0,85
Current uncovered Portion	= $22,000 \times (1.00 - 0.85) = 3,300$
Estimated Number of Errors	= $3300 / 69 = 48$
Estimated Error Density	= $48 / 22,000 = 0.0022$

Estimating Error Correction Costs

Estimation of Error Correction Costs

Version	Size	Coverage	Effort per Error	Error	Effort over all
Version_1	17,000	0.75	1,4	56	78.4
Version_2	20,000	0.82	1,6	52	83.2
Version_3	22,000	0.85	2,0	48	96.0

$$\text{Version}_3 = (22,000 \times (1 - 0,85) / 69) = 48 \times 2 = 96$$

Correction Effort = 96 Person Days

Estimating Evolution Costs

Estimation of Evolution Costs

- 1 Measure Size, Complexity and Quality of the last Version
 $\text{Justified_Size} = \text{Bare_Size} \times \text{Complexity} \times \text{Quality}$
- 2 Measurement of the Impacts of new Requirements
(Enhancements, Adaptations, Perfections)
 $\% \text{ Change} = \% \text{ Enhancement}$
 $\quad \quad \quad + \% \text{ Adaptation}$
 $\quad \quad \quad + \% \text{ Perfection}$
- 3 Measure Productivity so far
 $\text{Productivity} = \text{Adjusted Impact Area} / \text{Person Days}$
- 4 Estimate Effort for new Version
 $\text{Version_4} = \text{Person Days} = \text{Change Portion} / \text{Productivity}$

Measuring the System Size

Measurement of the System Size

Lines of Code	= Lines over all – Comment Lines – Empty Lines
Statements	= Declarations + Procedural Statements
Data Points	= Data Entities x 8 (Tables, Structures, Classes) + Data Keys x 4 + Data Relations x 2 + Data Attributes x 1
Object Points	= Classes x 4 + Methods x 3 + Associations x 2 + Variables x 1
Function Points	= Inputs x (3:6) + Outputs x (4:7) + Interfaces x (5:10) + Data Entities x (7:15)

Adjusting System Size through Complexity

Adjusting System Size through Complexity

Complexity = Median of
 (0,700)

- Data Complexity (0.720)
- Data Flow Complexity (0.760)
- Interface Complexity (0.920)
- Control Flow Complexity (0.600)
- Condition Complexity (0.480)
- Branching Complexity (0.640)
- Language Complexity (0.780)

Complexity Factor = Complexity / Median Complexity
 (1.4) = (0.7) / (0.5)

Adjusted Size = Raw Size x Complexity Factor
 (28.000) (20.000) x (1.4)

Adjusting System Size through Quality

Adjusting System Size through Quality

Quality = Median of

- Maintainability (0.500)
- Testability (0.600)
- Reusability (0.420)
- Conformity (0.720)
- Modularity (0.640)
- Flexibility (0.560)
- Readability (0.800)
- Portability (0.480)

Quality Factor = Median Quality / Quality
(0.83) = **(0.5)** / **(0.6)**

Justified Size = Bare Size x Quality Factor
(22.400) = **(28.000)** x **(0.8)**

Measuring previous Productivity

Measurement of previous Productivity

Adjusted Size of Version _(i)	= 22,400
Impact Domain of Version _(i)	= 0.15
Change Portion of Version _(i)	= 3,360
Effort over all of Version _(i)	= 360 Person Days
Productivity _(i)	= Change Portion _(i) / Effort _(i)
9.3 Stmts per PT	= (3,360) / (360)
Productivity so far that means 10 Productivity Units per Person Day	= Average (Version 1:n)

Impact Analysis of new Requirements

Impact Analysis of new Requirements

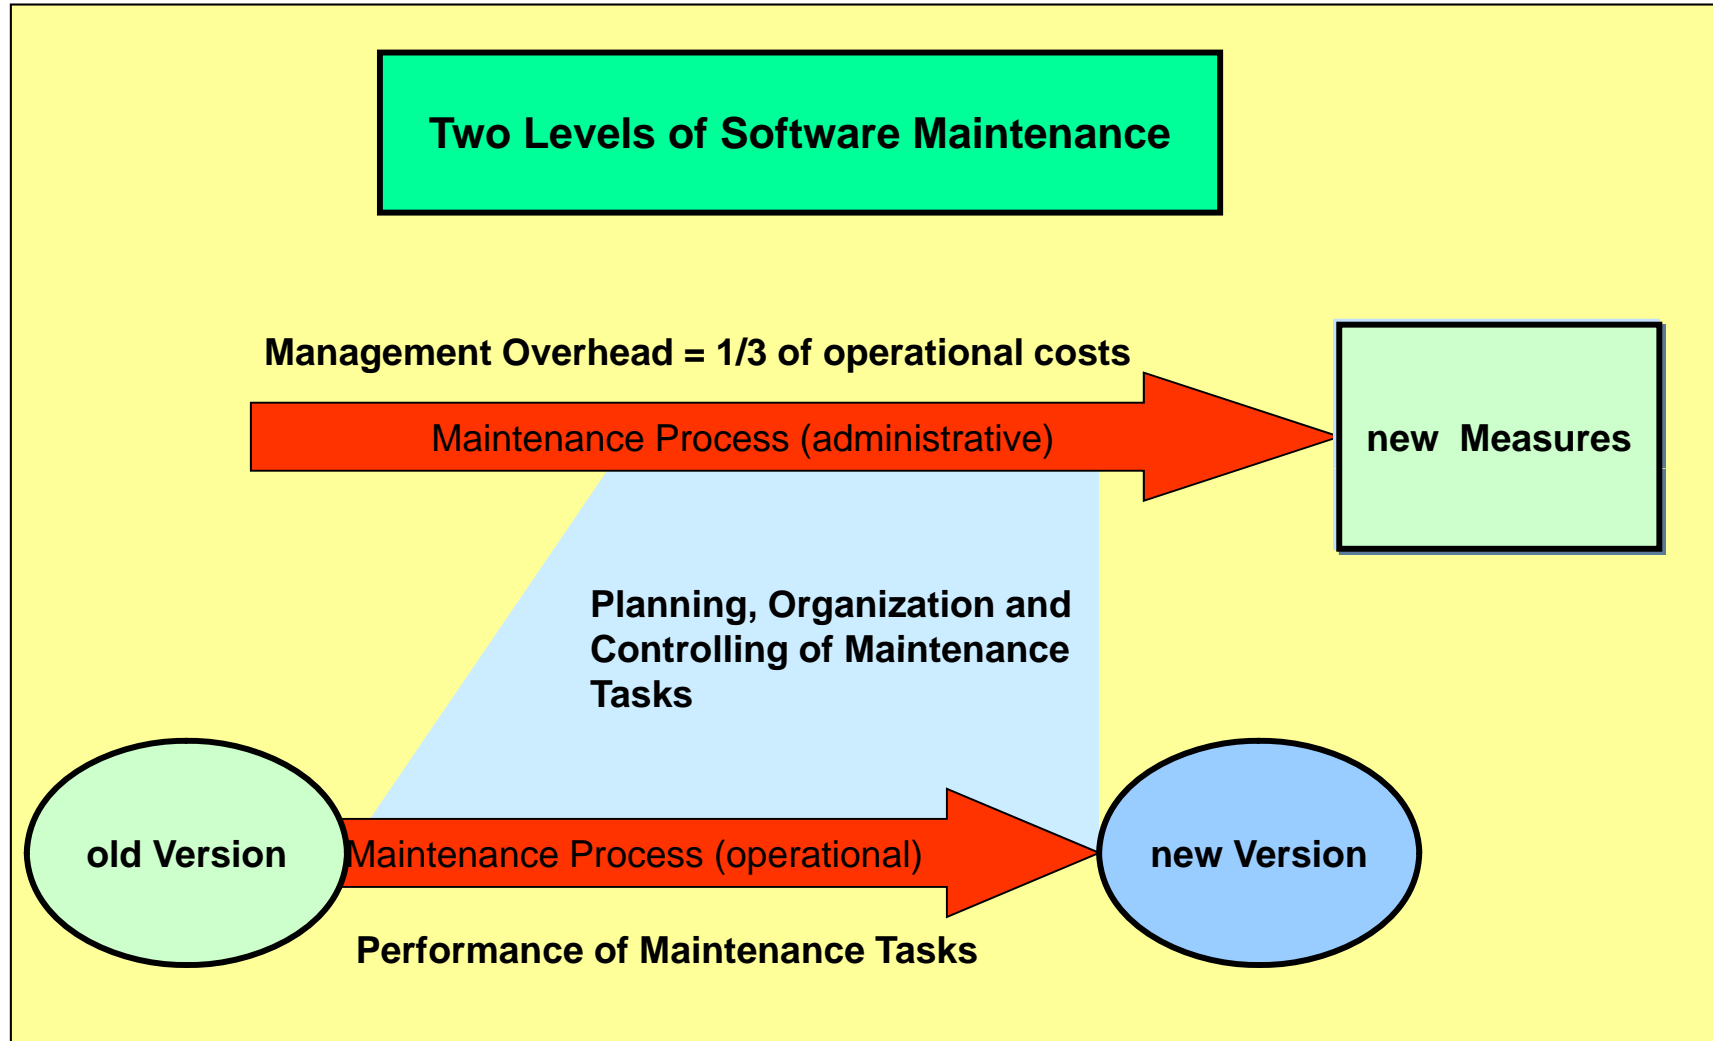

Enhancement Impact (0.060)	= (Enhancement_1 = 0.030) + (Enhancement_2 = 0.010) + (Enhancement_3 = 0.020)
Change Impact (0.020)	= (Change_1 = 0.005) + (Change_2 = 0.005) + (Change_3 = 0.010)
Perfection Impact (0.020)	= (Perfection_1 = 0.008) + (Perfection_2 = 0.012)
Impact over all (0.100)	= Enhancement Impact(0.06) + Change Impact (0.02) + Perfection Impact (0.02)

Estimating Evolution Costs of the new Version

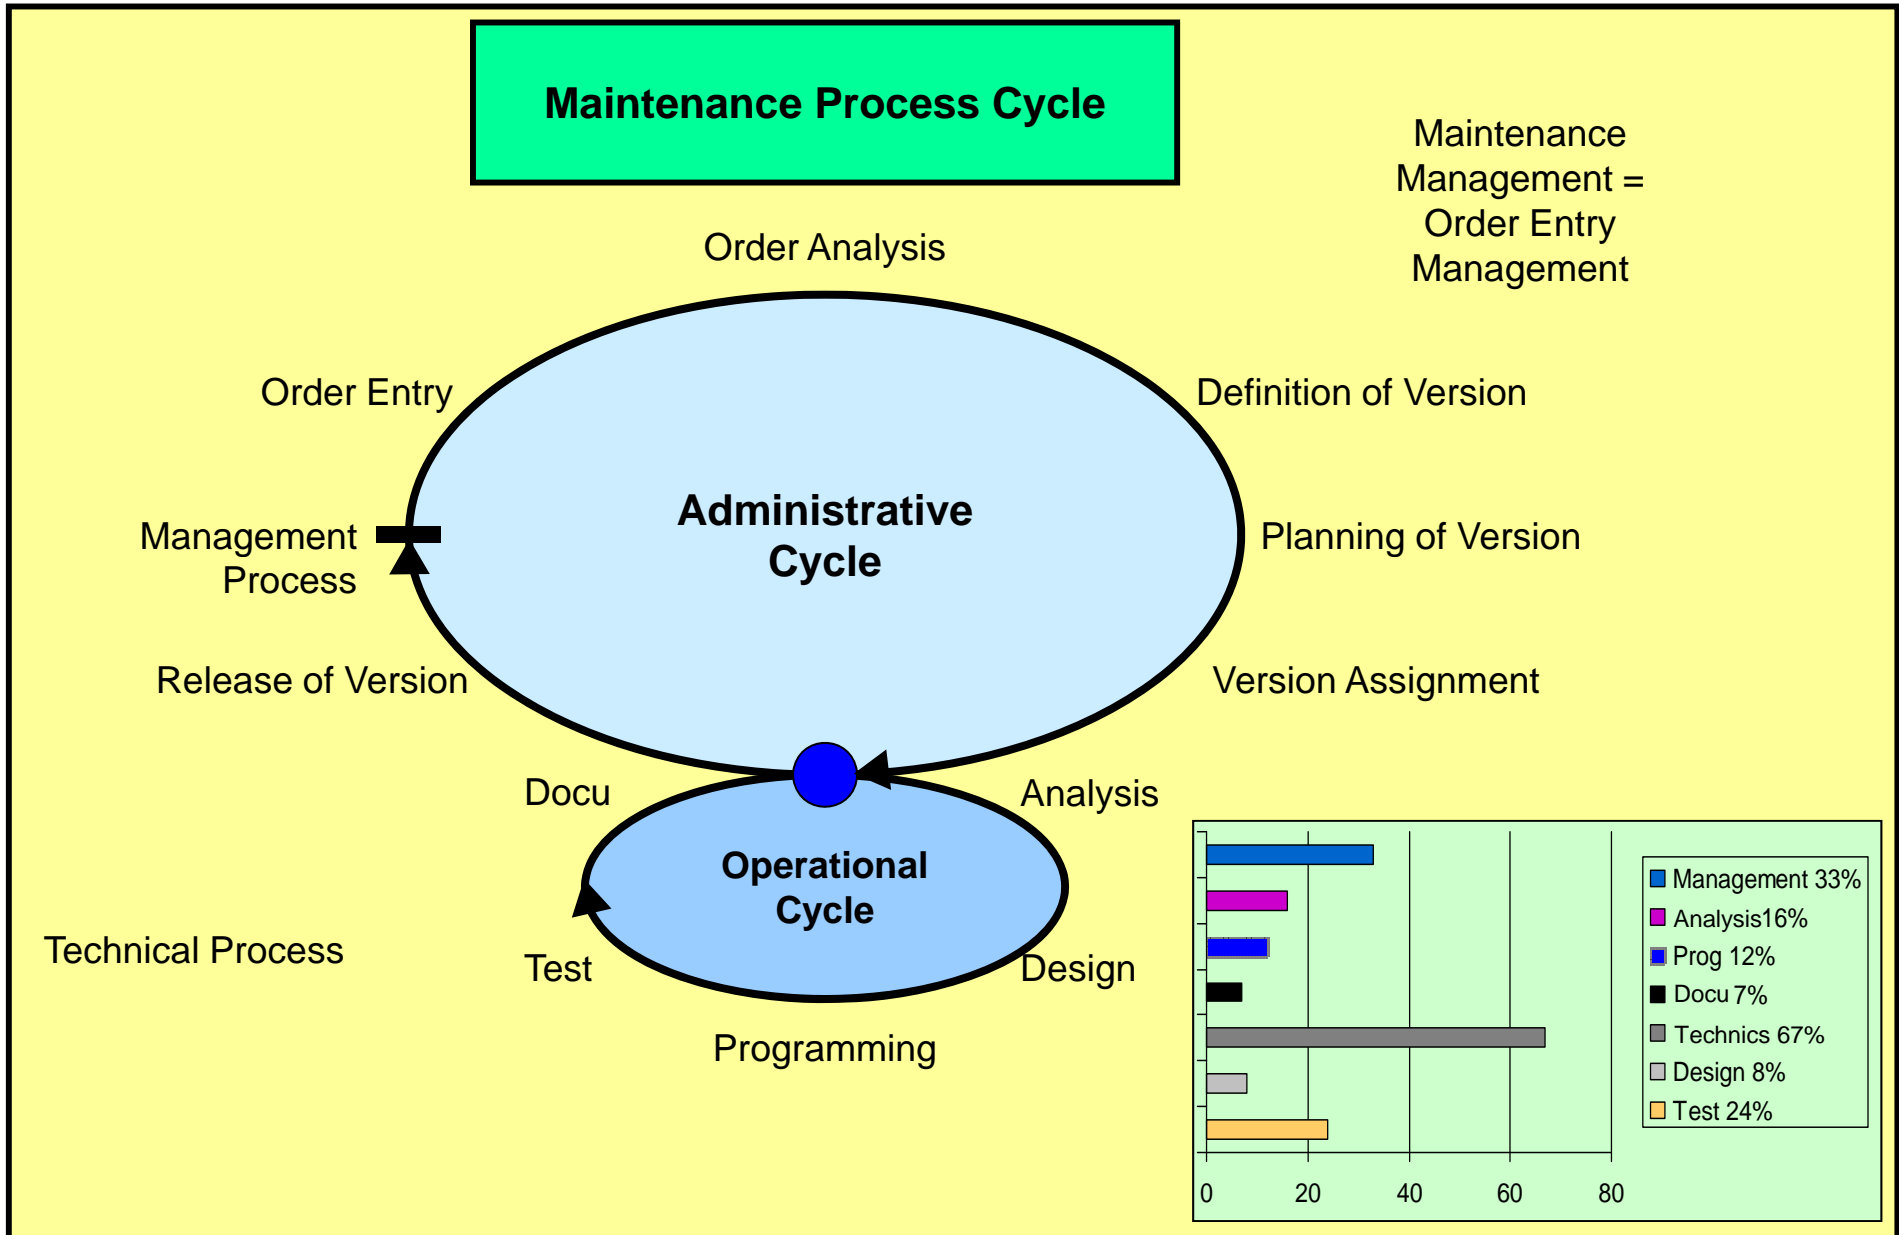

Estimation of Evolution Costs of the new Version

Change Proportion = 10% von 22,400 = 2,240 Productivity units
Productivity so far = 10 pro Person Days
New Effort = Change Proportion / Productivity so far
New Effort = (2,240 / (10)
New Effort = 224 Person Days

Costs of Software Maintenance Management

Maintenance Management Activities

Estimating Management Overhead Costs

Estimation of Management Costs

According to the Experience in the Maintenance Process:

Management = 33% of the Over All Effort

**Execution Effort = Correction Effort (96 PD's)
+ Evolution Effort (224 PD's) = 320 PD's**

**Management Costs = Execution Effort x 0.5
Management Costs = (320) x 0.5 = 160 PD's**

Calculating Overall Maintenance Costs

Calculation of Overall Maintenance & Evolution Costs

Over All Maintenance Effort = Correction Effort
 + Evolution Effort
 + Management Costs

Correction Effort	= 96 Person Days
Evolution Effort	= 224 Person Days
Management Costs	= 160 Person Days
Over All Effort	= 480 Person Days

Costs per Person Day = Euro 750

Costs of Maintenance Project = Euro 360 000
 (Next Pass through the Life Cycle)
