

OSGi and Design Patterns

Task 12.1: The OSGi Framework

Download Eclipse Classic 3.7.1 from <http://www.eclipse.org> and install the ObjectTeams Development Tooling (OTDT) and the ObjectTeams Equinox Integration (OT/Equinox) via the update manager of Eclipse.

Object Teams is part of the Indigo simultaneous release. This means, no further URL must be configured for installing the OTDT and OT/Equinox, simply select the Indigo - <http://download.eclipse.org/releases/indigo> software site and open the *Programming Languages* category.

To improve your understanding on OSGi in Eclipse read the tutorial of Lars Vogel¹.

1a) **Task:**

Now create a new OT Plug-in Project `dpf.osgi` for the OSGi framework Equinox. Make sure you add `org.eclipse.core.runtime` to the plug-in dependencies.

Create the following `plugin.xml` in the plug-in's root folder.

```
<?xml version="1.0" encoding="UTF-8"?>
<?eclipse version="3.7"?>
<plugin>
  <extension
    id="app"
    point="org.eclipse.core.runtime.applications">

    <application
      cardinality="singleton-global"
      thread="any"
      visible="true">
      <run
        class="dpf.osgi.Apparat">
      </run>
    </application>
  </extension>
</plugin>
```

Implement an application using the following code.

```
import org.eclipse.equinox.app.IApplication;
import org.eclipse.equinox.app.IApplicationContext;

public class Apparat implements IApplication {

    @Override
    public Object start(IApplicationContext context) throws Exception {
        Person hans = new Person("Hans");
        Person karl = new Person("Karl");
    }
}
```

¹<http://www.vogella.de/articles/OSGi/article.html>

```

        hans.identify();
        karl.identify();

        return null;
    }

    @Override
    public void stop() { }
}

```

Now create a second OT Plug-in Project `dpf.osgi.base` without generating an Activator and which only consists of the `Person` class outlined below.

```

public class Person {

    public String name;

    public Person(String name) {
        this.name = name;
    }

    public String getName() {
        return name;
    }

    public void setName(String name) {
        this.name = name;
    }

    public void identify() {
        System.out.println(name);
    }
}

```

Now create a new OSGi run configuration, deactivate all bundles, enable the `dpf.osgi.*` bundles and click *Add Required Bundles*. Then click *Validate Bundles* to ensure that no bundles are missing or conflicting.

Enable the `Enable OT/Equinox` setting.

Run the application. The commands `help`, `apps` and `startApp` on the OSGi console should get you started.

Solution: *Unfortunately, solution hint is not available.*

Task 12.2: ObjectTeams and OT/Equinox

2a) **Task:**

Try out and understand the ObjectTeams Observer pattern example which can be found under File ⇒ New... ⇒ Examples...

The ObjectTeams Language Reference² provides detailed explanation on roles in ObjectTeams.

Solution: *Unfortunately, solution hint is not available.*

2b) Task:

In this subtask we are going to extend the example of Task 1. Create an ObjectTeams Plug-in Project `dpf.osgi.ext` (without generating an Activator).

Add `org.eclipse.objectteams.otequinox` to the dependencies via `dpf.osgi.ext`'s `MANIFEST.MF`.

Import the exported package of `dpf.osgi.base` at `dpf.osgi.ext` and the packages of `dpf.osgi.base` and `dpf.osgi.ext` at `dpf.osgi`.

Now integrate the Team below in the new plug-in and change the implementation of `IApplication` in the `dpf.osgi` plug-in.

```
public team class University {

    public void register(Person as Student ersti, int matrikel) {
        ersti.matrikel = matrikel;
    }

    public class Student playedBy Person {

        studentIdentify <- before identify;

        public int matrikel;

        public void studentIdentify() {
            System.out.println("Matrikel: "+matrikel);
        }
    }
}
```

²<http://wiki.eclipse.org/OTJ>

```

import org.eclipse.equinox.app.IApplication;
import org.eclipse.equinox.app.IApplicationContext;

public class Apparat implements IApplication {

    @Override
    public Object start(IApplicationContext context) throws Exception {
        Person hans = new Person("Hans");
        Person karl = new Person("Karl");

        System.out.println("--No context--");
        hans.identify();
        karl.identify();

        University u = new University();
        u.activate();

        u.register(hans, 123);
        u.register(karl, 345);

        System.out.println("--Uni active-----");
        hans.identify();
        karl.identify();

        u.deactivate();

        System.out.println("--Uni inactive---");
        hans.identify();
        karl.identify();

        return null;
    }

    @Override
    public void stop() { }
}

```

To start this application some changes need to be integrated in the Eclipse run configuration.

First, register the extension point `org.eclipse.objectteams.otequinox.aspectBindings` in the `plugin.xml`.³ It should look like this:

```

<extension point="org.objectteams.otequinox.aspectBindings">
  <aspectBinding
    icon="platform:/plugin/org.eclipse.objectteams.otdt.ui/icons/ot/calloutbinding_obj.gif">
    <basePlugin
      icon="platform:/plugin/org.eclipse.pde.ui/icons/obj16/plugin_obj.gif"
      id="dpf.osgi.base">
    </basePlugin>
    <team
      activation="ALL_THREADS"
      class="dpf.osgi.ext.University"
      icon="platform:/plugin/org.eclipse.objectteams.otdt.ui/icons/ot/team_obj.gif">
    </team>
  </aspectBinding>
</extension>

```

2c) Task:

Extend the previous solutions with the role `professor`. A professor can be identified through his group membership.

³http://wiki.eclipse.org/OTEquinox/Aspect_Binding

```
---Uni inactive---
...
---Uni active-----
Matrikel: 123
Hans
Matrikel: 345
Anja
Peter is professor of the database group
---Uni inactive---
...
```

Solution: *Unfortunately, solution hint is not available.*

2d) Task:

Extend the solution with lectures, which are held by professors and attended by students. Implement a method which returns all lectures attended by a student.

Solution: *Unfortunately, solution hint is not available.*
