Objectives

- Knowledge about Sales is important for startups and innovation managers
- Sales does not mean to persuade people, but to make them aware of their needs
- The startup must *develop* the knowledge of the need of the customers *before* the customer can realize the advantages of the product

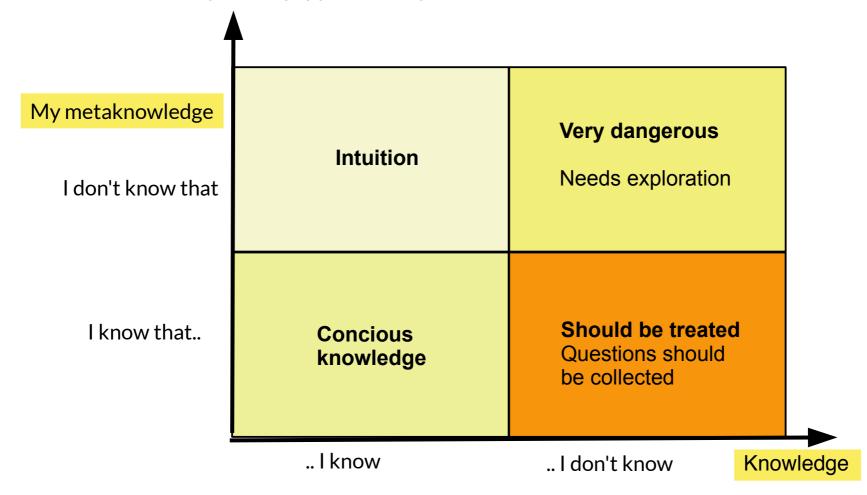

12.1. The Sales Funnel

Starting with E. St. Elmo Lewis in 1898 [wikipedia:Purchase_funnel]

Rumsfeld Portfolio on Knowledge

5 Software as a Business

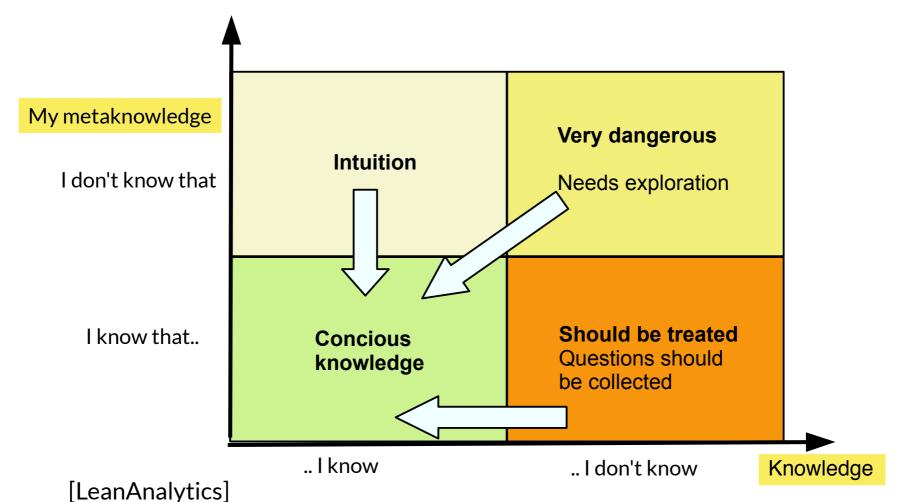

- Potential customers suffer from the Rumsfeld Portfolio
- "We didn't know that we didn't know"

[LeanAnalytics]

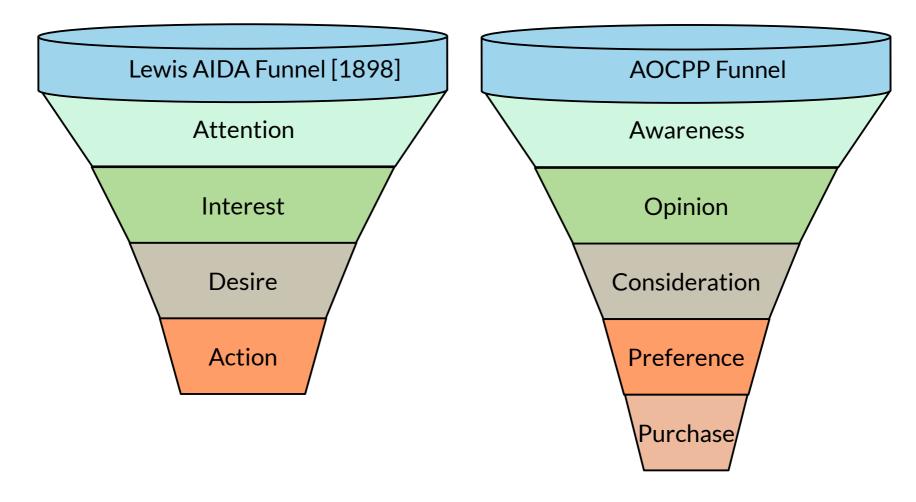

- Potential customers
 - do not know that they have a problem, nor need a solution, nor a feature
 - must be advanced to KNOW-KNOW

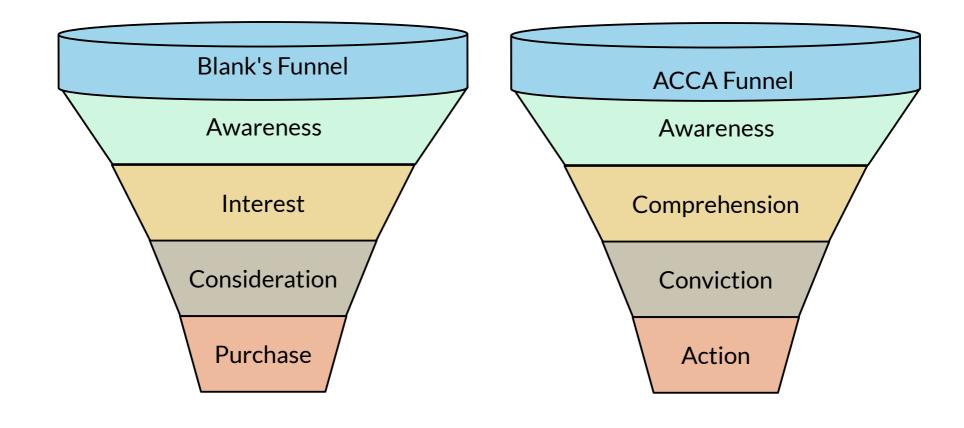

Sales Funnels

- A sales funnel describes the travel of a customer before buying a product.
 - Part of the funnel describes the wandering in the Rumsfeld portfolio linearly
- The funnel tightens not all become customers

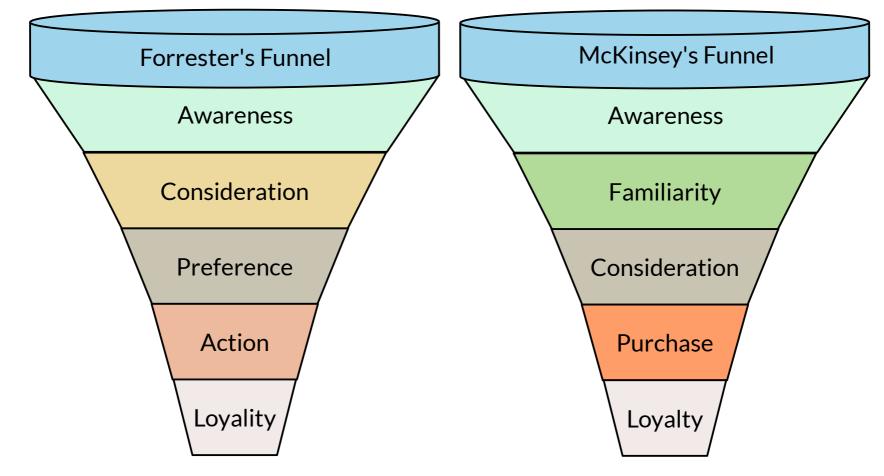

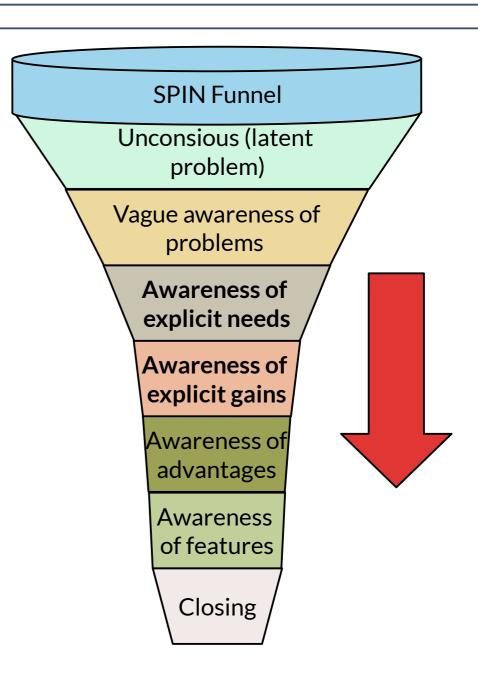

Sales and Loyality Funnels

SPIN™ Funnel

- The SPIN™ funnel [Rackham] is a sequence of steps developing the customer's awareness and comprehension
- Central step: changing the awareness of hidden needs to explicit needs
- Only at the very end the product's features are presented – so that the customer has no problem to understand why he needs it
- Advancement in the funnel is based on questions (question-based traveling)

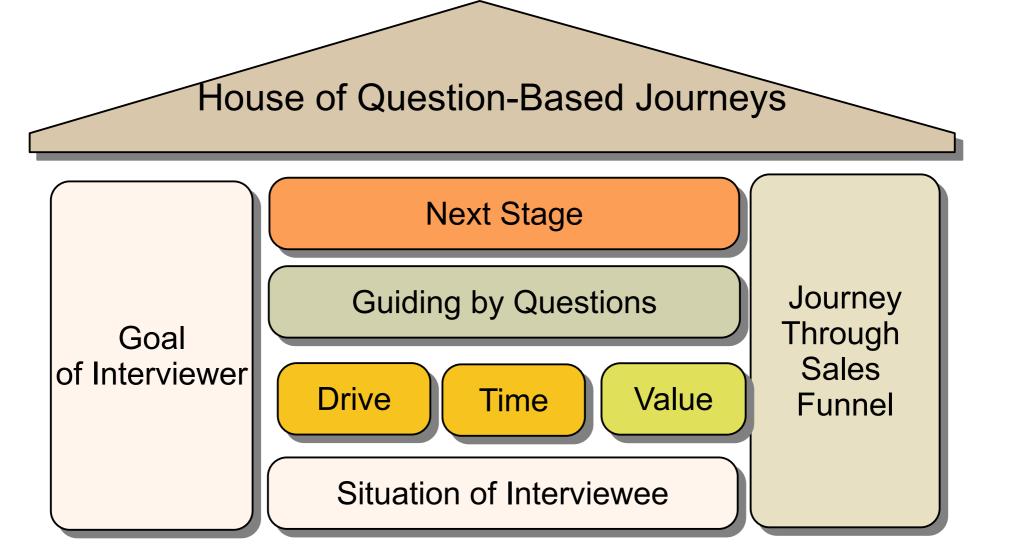

House of Question-Based Journeys Through the Sales Funnel

11 Software as a Business

The salesperson tries to guide the potential customer on a journey through the sales funnel

Fakultät Informatik - Institut Software- und Multimediatechnik - Softwaretechnologie - Prof. Aßmann - Software as a Business

12.3 SPIN™ Selling, and Interview-Based Selling Method

Help the customer think and develop himself through the funnel...

9 When I first discovered the SPIN™ model, I realized that I needed to improve my own selling. I was doing too much telling. I was jumping in with solutions too quickly. Most of my questions were Situation Questions. In short, the discoverer of the SPIN™ model was lousy at selling. [Rackham]

13 Software as a Business [Rackham]

SPIN™ selling is a question-based problem analysis method for customer interviews, which reveals hidden needs of the customer

- "The ignorant customer with a latent problem": The premise is that customers do not know
 - Which problem they really have (Problem ignorance, implicit need)
 - Which solution they can get (problem-solution fit)

Only a customer knowing his needs explicitly will by something.

Implicit Needs

I am a bit unhappy with our state...
May be, we have got a problem with...
We loose customers, do not know why
It is definitely difficult to...
Our customers have to wait...

Impact/Effect Questions Need-Payoff Questions

Does this imply that..?
Would it pay off to have a solution for that?
What would you require to solve this problem?

Explicit Needs

I need..
I would like to have..
Urgently, we require..

s, © Prof. Uwe Aßmann

Gains are not Advantages nor Features

14 Software as a Business [Rackham]

Before mentioning the product, it should be very clear which added value (pain-gain benefit) a solution has

Only pain-gains/benefits are important, if they are linked to Needs/Pains Features of a product Value Proposition Advantages of a product Pains/Needs Gains / benefits of a solution

Software as a Business, © Prof. Uwe Aßmann

SPIN™ Canvas (derived from SPIN™ Form)

15 Software as a Business

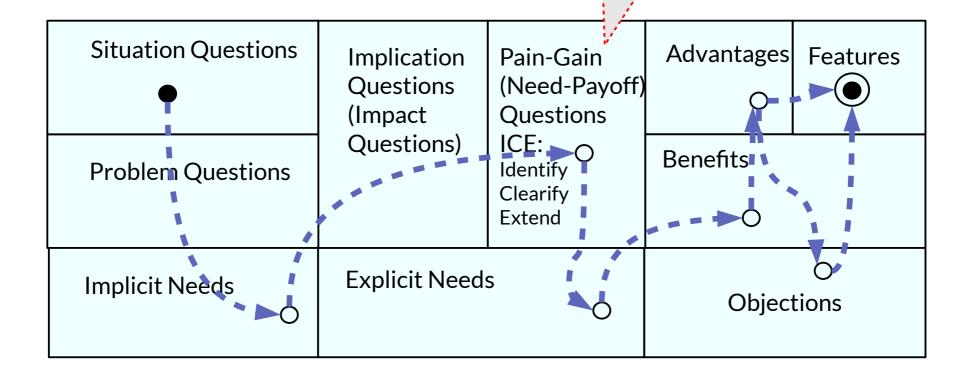

[Rackham] SPIN uses a "form" (a canvas) to move the customer from "implicit" to "explicit needs"

The SPIN™ canvas supports the progress in the SPIN™ funnel. Use it for preparing a sales meeting/pitch

Value Proposition

Questions

Fill order: Left-to-right

spln: The Importance of Implication (Hidden Effect) Questions

- Implication questions (hidden effect, impact questions) play an important role in SPIN™ selling
 - They reveal the implicit problems of the customer
 - They clearify the situation
 - They create the desire for change and for solutions
 - They reveal potential pains of the future
 - They lift to the next level of the SPIN funnel
- Exercise: put up 5 implication questions on the state
 - "My father is getting 65 years old"
 - "My wife gets permanently ill"
 - "My car breaks down"

spi**N**: The Importance of Pain-Gain (Need-Payoff) Questions

- Pain-Gain (pain-benefit, need-payoff) questions play an important role in SPIN selling
 - They intensify the desire for change and for solutions
 - They reveal the gains (payoff) of a solution to the customer
 - They clearify the desired benefits of a solution
 - They reveal potential gains of the future
 - Need-Payoff questions are better than pure benefit questions, because they link a customer's pain to a potential solution
- ► ICE questions are need-payoff questions to identify, clearify and extend explicit needs
 - How can a gain be identified from an explicit need?
 - How can a gain be clearified from an explicit need?
 - How can a gain be extended from an explicit need?
- Exercise: put up 5 pain-gain questions on the state
 - "My father is getting 65 years old"
 - "My wife gets permanently ill"
 - "My car breaks down"
- Then, vary the questions with the ICE scheme

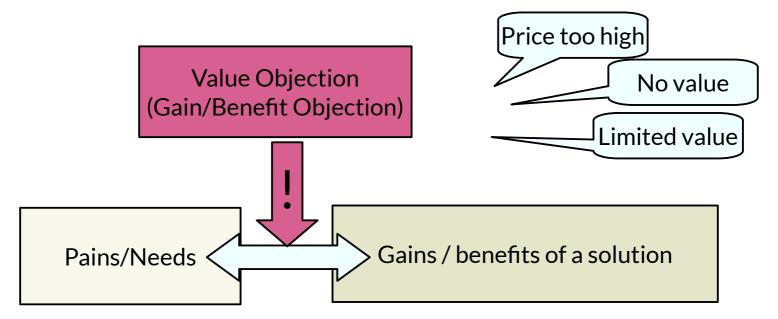

Lower the Risk of Asking Benefit Questions Too Early

- [Rackham] Need-payoff questions should not be used anywhere in the sales interview. They need to be positioned carefully:
- Not too early in the funnel, but after hidden needs have been made explicit pains
- Before the product's features presented, because the need-benefit questions create a desire for gains, advantages and finally features
- When you see that the customer can benefit in several aspects then use an Extend question to reveal these other aspects (ICE questions)
- When the customer needs to justify his decision to his management then he needs a clear understanding of the arguments ("comprehension")
 - Benefit questions give the customers arguments
- When a customer is subjective, i.e., does not yet know about objective reasons to buy your product, the benefit questions need to be asked carefully, to guide his thinking for more objective reasoning

Customers May Raise Value Objections

- Features make people think of price and money
- Advantages make people raise objections
- Benefits may create agreement, if Pains are understood
 - If features and advantages are treated too early, value objections result

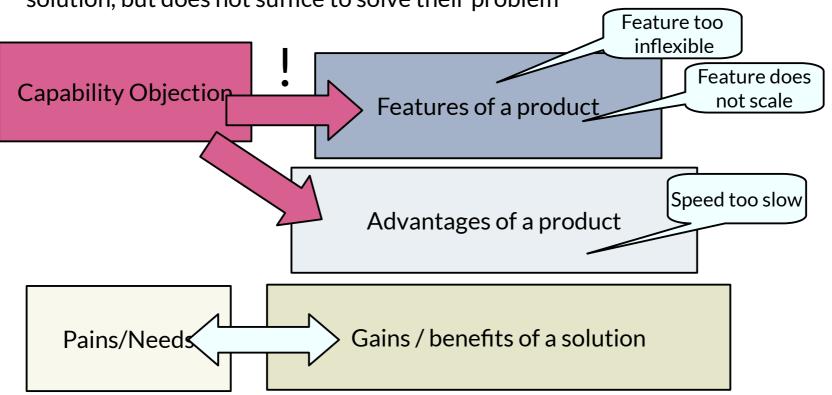

- Counterarguing Value Objections: Go back in the interview to need-payoff questions and work on the relationship of need and benefit
- Preplan objections: objections should be put up in the SPIN canvas before the sales meeting

Customers May Have Capability Objections

20 Software as a Business

 Customers may have the feeling that your company or product provides a basic solution, but does not suffice to solve their problem

- Counterarguing Capability Objections: Provide more evidence of capability, resources, backup
- Tell reference stories: Provide fotos, provide names of customers
- Demonstrate capability
- Promise test period or "money back" (dangerous)

12.4 Problem-Solution Sheets Assemble Possible Value Propositions

A **problem-solution sheet** is a simple table collecting problem-solution tuples.

It helps to communicate with the customer:

- Prepare and review discussions, sales meetings, customer interviews, and cold calls
- Collect problem-solution ideas in a diary
- Problem management

Implicit Needs Transformation Sheet [SPIN]

- The Implicit Need Transformation Sheet shall help to find implicit needs and how they can be made explit for the customer
 - It presents the current state of problem hypotheses in form of a problemsolution list
 - Using "Hidden-effect/impact"-questions
 - Using "What-if"-questions
 - Using "Need-payoff" questions

Implicit Need	Impact	Need-Payoff	Explicit Need

Bosworth's Pain Sheets and the Pain Diary

- Every sales person has to work on the problems of his customer's domain
- [Bosworth] suggests the following 3-step table for thinking about the pains of the customers (pain sheet)
 - First think yourself and fix a problem-solution tuple
 - Then find a question to reveal this the customer
- Before you do a cold call, fill in some pain sheets
- Collect them in a pain diary
- https://md.saab18.inf.tu-dresden.de/ProblemDiary

Reasons (Causes) [Diagnosis]	Impact (neg. effects) [Exploration]	Capabilities (benefits, advantages, Features) [Vision building]

Problem Presentation List [Blank/Dorf]

- The problem presentation shall help to find information from the customer about his problem.
 - It presents the current state of problem hypotheses in form of a problemsolution list
 - It shall ask questions for problem analysis and VPA, preferably prepared by filling the canvases before
 - Using "What-if"-questions
 - Using "Hidden-effect"-questions
 - Using "Cost" questions
 - Using "Pain" questions

Problem	Solution Today	Solution Tomorrow

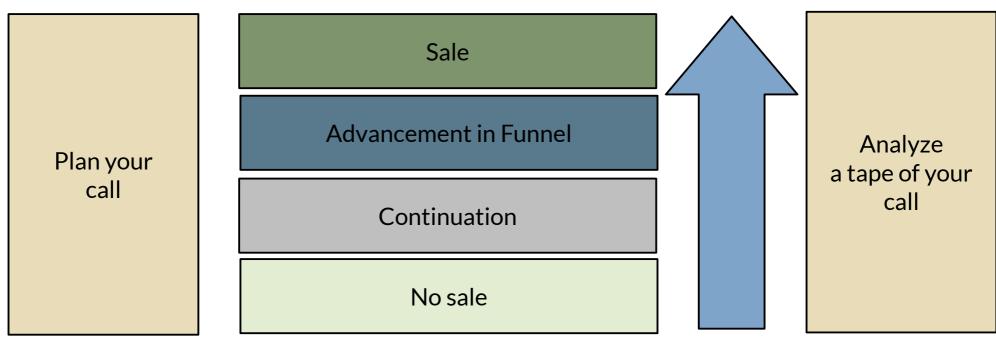

Fakultät Informatik - Institut Software- und Multimediatechnik - Softwaretechnologie - Prof. Aßmann - Software as a Business

12.5 Planning Customer Interviews with SPIN

Cold Calls with SPIN™

- The SPIN™ canvas can be used to prepare cold calls.
- Plan questions: fix implicit need questions, need-payoff questions, advantages, objections before
 - Do not fix on features nor advantages of your product they come very late into the game
 - Create a call plan
- Plan the advance of customer's travel: how far can you guide her in the sales funnel?
 - Do not expect too much: anything but "no sale" is a big win
- Tape your Call and analyze the tape to get feedback

Customer Interviews with SPIN

- Do a SPIN canvas analysis for the planned customer interview
 - Be sure that you answer need-payoff questions for a certain customer segment reliably correct
 - Be sure that you plan travel through the SPIN funnel
- Plan value and capability objections
- Plan counterargueing objections
- Try to arrive at benefit or feature questions
- Produce a cold call plan
- Do it: Advance some potential customers with cold calls (customer interviews)

12.5.2 Combining Jobs-to-be-Done (JTBD) and SPIN

A method to generate good questions about the customer's daily workflows

Software as a Business, © Prof. Uwe Aßmann

Software as a Business

https://strategyn.com/customer-centered-innovation-map

- The question "How can our service/product help the customer executing his job?" can be posed in a customer solution interview and reflected together with the customer.
- If you know the 8 phases of JTBD by heart, you can generate the questions at any time during the interview.

Jobs-to-be-Done (JBTD) Workflow Framework Locate Define Confirm Prepare How does a customer How does a customer How does a customer How does a customer find the items necessary for define his job? prepare his job? make sure that he can do his job? his job? **Monitor Execute** Modify Conclude How does a customer How does a customer How does a customer How does a customer measure and check his job? adjust the quality of his job? wrap up his job? do his job?

12.6 "Solution Selling" and other Matrix Travels

"Solution Selling" [Bosworth] is a second type of question-guided travel through the sales funnel.

A matrix travel is a carefully planned customer funnel journey along the dimensions Drive and Time/Value.

Interview Method "Solution Selling", a Matrix Travel

- ► [Bosworth] introduces another canvas "Solution Selling" for **vision reengineering of the customer** working with **cause and effect questions** exploring a **cause-effect-graph**
- ► The **Solution Selling Canvas** is a 9-field *matrix of complex questions* between
 - **drive type:** open, control, confirm
 - analysis type: Bosworth's pain sheet with cause-effect analysis, capabilities (vision, gains)

OCC x RIC	Reasons (Causes) Diagnosis	Impact (neg. Effects) Exploration	Capabilities Vision Building (Visualization)
Open Questions			
Control "Drill- Down" Questions			
Confirm Questions			

Pain Sheet Control Questions

32 Software as a Business

Pain sheets assemble causes, effects, capabilities. For a sales meeting, they can be used to derive questions.

	Reasons (Causes)	Impact (neg. Effects)	Capabilities
Open Questions	Why did your losss happen?	What will happen when the loss reappears?	What would help you to prevent the repeat of the loss?
Control Questions Do I understand right that the reason for your loss is the lack of a good method?		Does this mean that if the loss reappears, you will be under Chapter 11?	Does this mean that a new method would make you happy?

Result: Bosworth's Pain Sheets and the Pain Diary

- Every sales person has to work on the problems of his customer's domain
- [Bosworth] suggests the following 3-step table for thinking about the pains of the customers (pain sheet)
- Before you do a cold call, fill in some pain sheets
- Collect them in a pain diary

Reasons (Causes)	Impact (neg. effects)	Capabilities (benefits, advantages, features)

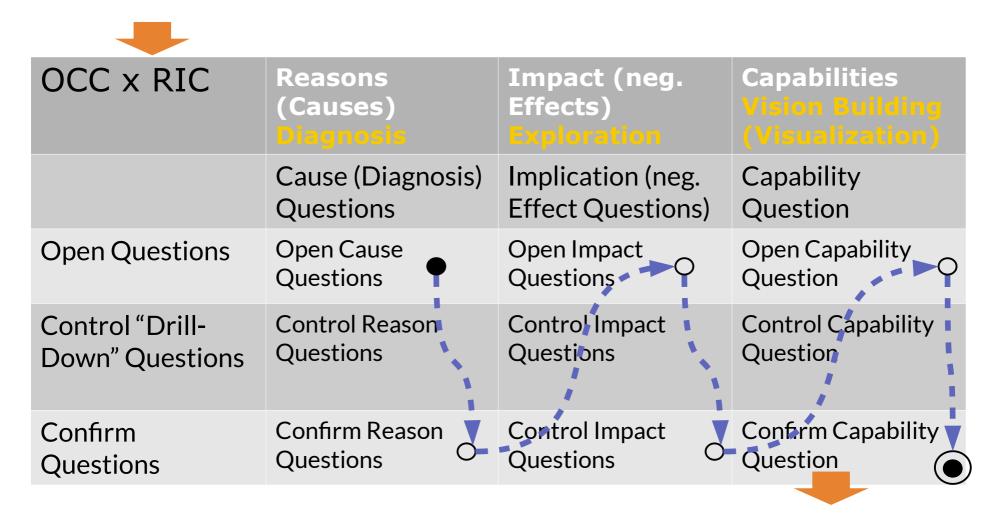

Control Questions (Ext.)

- A control ("drill down") question controls the customer and puts him into a containment. It puts the customer into a defensive position, but also tries get a step forward in the discussion:
 - Closed control question: Closed questions put up the strongest containment for the customer
 - "Is this because..." (control reason question)
 - "Is the consequence of this problem that..." (control impact question)
 - "Wouldn't a new IT system help you?" (control capability question)
 - Open containment question asks the customer about a state of the art to
 - "How did you arrive in this problem?" (control reason question)
 - "How will this develop next year?" (control impact question)
 - "How will a new IT-system cure your budget?" (control capability question)

Solution Selling Question Canvas (for "Vision Reengineering")

Exc. Solution Selling Question Canvas for "Vision Reengineering" on **Diapers with Water Sensors**

OCC x RIC	Reasons (Causes) Diagnosis	Impact (neg. Effects) Exploration	Capabilities Vision Building (Visualization)
	Cause (Diagnosis) Questions	Implication (neg. Effect Questions)	Capability Question
Open Questions	Open Cause Questions	Open Impact Questions	Open Capability Question
Control "Drill- Down" Questions	Control Reason Questions	Control Impact Questions	Control Capability Question
Confirm Questions	Confirm Reason Questions	Control Impact Questions	Confirm Capability Question

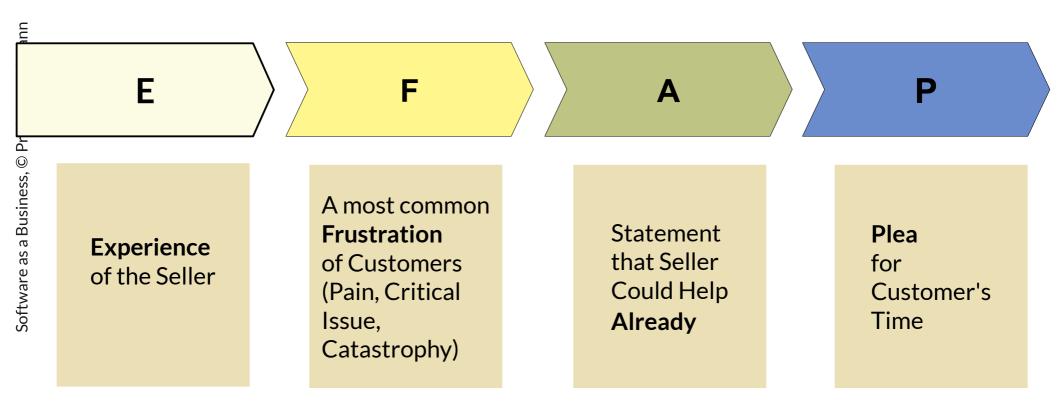

12.7 Reference Stories in Sales Meetings

Very good reference story page: https://www.3m5.de/referenzen/software-technology/

Cold Calls with Reference to Reference Stories

- [Bosworth] recommends the following scheme E-F-A-P for the introduction of Cold Calls
- If the plea for time is successful, the reference story should be told

Telling Reference Stories with SiCRViDR

- Every sales person has to have several reference stories in this mind (to counter value or capability objections)
- [Bosworth] suggests the following 6-step canvas (fill order left to right)
- Before you do a cold call, fill in some Reference Story Canvases
- Encounter value and capability objections

Situation of the Customer	Reasons	Required Helping Vision	Delivery of our Company
Critical Issue			Result for the Customer

Fakultät Informatik - Institut Software- und Multimediatechnik - Softwaretechnologie - Prof. Aßmann - Software as a Business

12.8 Matrix Canvases

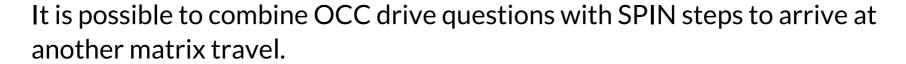

Very good reference story page: https://www.3m5.de/referenzen/software-technology/

Other OCC Matrices: SPIN Selling Question Canvas

41 Software as a Business

Matrix Travel with a Matrix Canvas: Drive x Topic

42 Software as a Business

Start

A matrix canvas spans up a matrix between two (ordered) dimensions.
It enables a matrix travel with the customer:
Its progress is a wavefront along the dimensions.

	Situation Background Commonality	Problems Blocking Factors	Effect Implied Need Risks What-if	Need-Payoff Pain-Gain Benefit (Olympic, Efficiency)	Benefit (Olympic, Efficiency)	Advantage (Olympic, Efficiency) Feature
Open Questions						
Control Questions						
Confirm (Summarizati on) Questions						
Containment questions						
Closed questions					`	

End

The End

- Explain the difference of implication questions and need-payoff questions.
- Why is it important to travel with the customer from implicit needs to explicit needs?
- How do you encounter a value objection?
- How do you encounter a capability objection?
- How can you use "drive questions" in the costumer journey of "Solution Selling"?
- Explain the Schwarzkopf type of Early Adopter.
- Why is it important to have a competitive leading edge?
- Explain the difference of a problem diary and a pain diary.
- Explain how you would prepare a cold call.
- Why is it important to explain the advantages of your product very late in the customer journey?
- Why is a matrix canvas a good tool for customer solution interviews?
- Explain a matrix journey.
