This article is based on discussions at the OCL2010 Workshop and in particular on contributions of Mariano Belaunde. I recommend for more details his paper (
 pdf
).

Mariano pointed out that OCL advanced users and toolbuilders should contribute to the OCL maintenance effort. The OCL 2.2 RTF mailing list with all issues is available here . There is a simple procedure for posting new issues (which is not restricted to OMG members). Visit page:
 http://www.omg.org/technology/agreement.htm

Since the OMG OCL RTF mailing list is perceived to be inaccessible to many users, some discussions for which a wider audience is appropriate take place on the Linked In OCL Users Group. Access can be obtained via http://www.linkedin.com/groups?gid=3007822 .
